

LG Digital Health Brand Story

About Us

LG Electronics has a rich, 60-year legacy of innovation with award-winning products and technology.

From home appliances and entertainment devices, to enterprise business solutions, our mission has always been to create a better life for people and a better future for our planet through smart life solutions.

LG relentlessly pursues innovation to help us live better lives with solutions designed to meet evolving needs and values while driving advanced digital transformation.

Now, we're excited to extend our legacy to the healthcare industry, where there is a critical need for innovative technology solutions that can improve patient care experience while addressing challenges such as staffing shortages, rising costs and disconnected systems.

We're aiming to disrupt the status quo. By improving care coordination and reducing recovery times, we can create a more connected journey, transforming the patient experience.

At LG Digital Health, our vision is to enable high-quality, personalized whole person care experiences from hospital to home.

And we're committed to creating industry-leading digital health technology solutions that prioritizes quality and reduces costs to enable exceptional patient and provider experiences.

To help our vision thrive, we're fueling our innovation with great thinkers, brands, deep industry relationships and forward-thinking partners to deliver game-changing solutions and help care providers deliver better patient care.

Building upon our established brand presence in hospital TV displays, medical monitors and digital x-rays in hospitals we're bringing new digital services and capabilities with data analytics and AI to the healthcare market to transform the patient experience.

Introducing the Carepoint™ TV Kit Pro, by LG

In 2022, we launched our first digital health solution, the Carepoint TV Kit, by LG to increase efficiency by enabling clinicians to monitor multiple patients from one convenient location and managing virtual rounding

and nursing remotely. Designed on a scalable platform, it allows specialists and family members to be a part of the patient care journey, creating a more connected and seamless healthcare experience.

We look forward to partnering with forward-thinking care providers at hospitals and long-term care facilities who want to embark on this journey with us and lead the way to a new era of healthcare innovation and patient care.
